

The product line of development boards LDM-PP 1.xxxx is a printed circuit board, size 100x71x12 mm and prototypical field 71x50 mm (hole pitch 2.54 mm) with installed chip FPGA DD1 of the company Altera a family of MAX 3000A CPLD or MAX 7000S CPLD in the housing TQFP-44. For the convenience of the design the board under the chip DD1 is traced so that it is convenient to solder by wiring (pins in/out have appropriate areas, provided by the housing DD1, indicated by relevant numbers). The development board has a connector XS3 (IDC-10MS) to connect a download cable LDM-USB-Blaster, LDM-PB 2.01 ByteBlasterMV or its analogs (in the mode JTAG). Power can be carried out by an external source of stabilized with the voltage + 9 ... 12 V that is connected to the connector XS1. LEDs VD2 and VD4 are power indicators.

ALTERA

Fig. 1. General view of the development board LDM-PP 1.xxxx

Linear voltage converter DA1 (LM317D2P) in the housing D2PAK transforms supply voltage to the voltage 3.3 V or 5.0 V, it depends on the type of FPGA (Table 1).

Table 1

Main characteristics of the development board.

Board Edition	Type of FPGA	Voltage FPGA, V	Number pins in/out	Logic capacity of logic cells
LDM-PP 1.3032	EPM3032ATC44	3.3	34	600
LDM-PP 1.3064	EPM3064ATC44	3.3	34	1250
LDM-PP 1.7032	EPM7032STC44	5.0	36	600
LDM-PP 1.7064	EPM7064STC44	5.0	36	1250

The development board is intended for prototyping devices designed on FPGA of the company Altera a family of MAX 3000A or MAX 7000S and also for assembly completed devices by mounting necessary components on the prototypical field of the board. Use of LDM-PP 1.xxxx allows minimizing the implementation time of the product on the market.

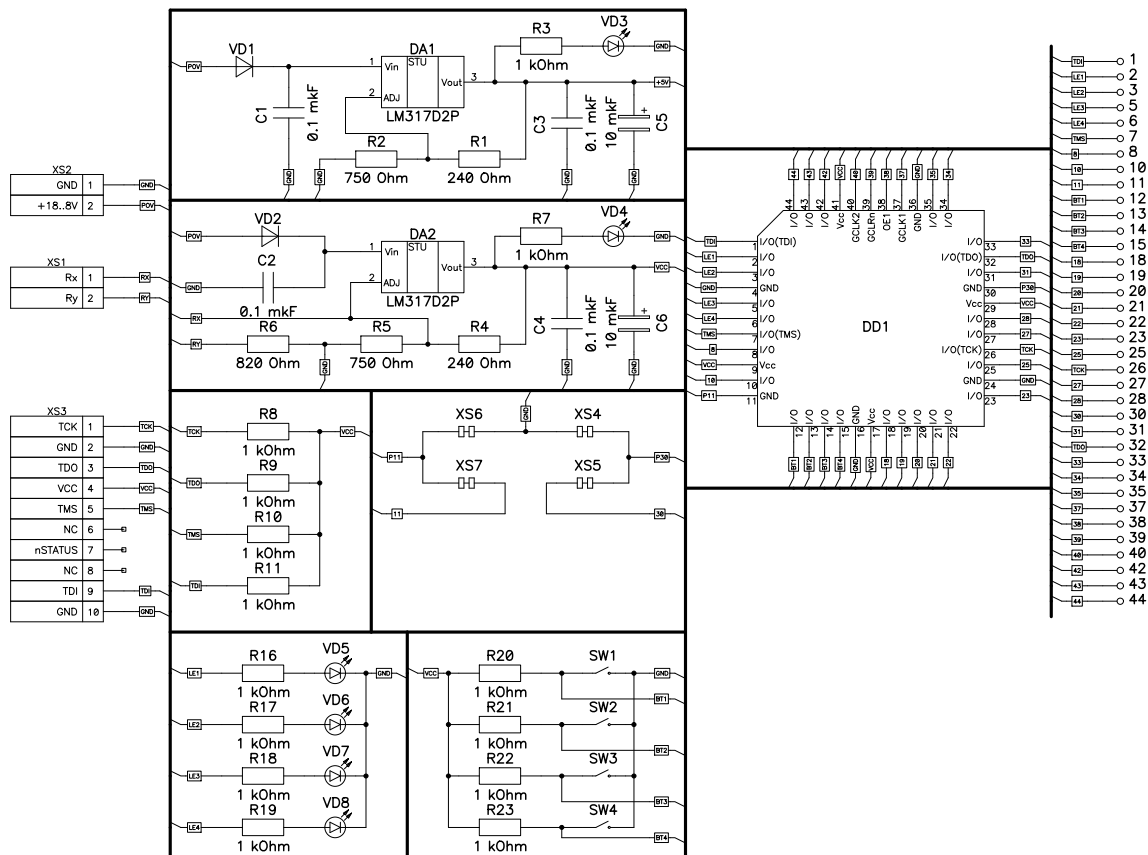

Fig. 2. The electrical scheme. LDM-PP 1.xxxx

There are four LEDs VD5-VD8 and four buttons SW1-SW4, on the board which are connected with FPGA. It is intended for simplification of designing and can be useful during the test of project.
